

Body Blueprint® Beginner Guide

Body Blueprint® Beginner Guide

Science-backed. Ancestrally aligned. Built for lasting transformation.

Module 1: Foundations & Philosophy

You don't need motivation. You need biology-aligned systems.

The Problem

Modern health advice is a mismatch for human biology. We're told to count calories, fear fat, and chase motivation — while living in a world of ultra-processed food, artificial light, and chronic stress. The result? Hormonal chaos, metabolic dysfunction, and emotional burnout.

The Truth

Your biology hasn't changed — your environment has. Our ancestors didn't track macros. They ate meat, berries, and seasonal vegetables. They walked, slept with the sun, and lived in sync with their physiology. Their habits activated satiety hormones, stabilized blood sugar, and built resilient bodies.

The Blueprint

This guide restores that alignment — using ancestral principles, modern science, and habit design to help you thrive.

Core Tenets:

- Activate GLP-1 through food, movement, and sleep
- Eat for satiety, not stimulation
- Move daily, even if lightly
- Sleep like your biology depends on it — because it does
- Stack habits, not hacks
- Build identity through repetition

Module 2: Nutrition & GLP-1 Activation

GLP-1 is your satiety hormone. It regulates appetite, insulin, and cravings. You can activate it naturally through:

Meat: Nature's Multivitamin

- Rich in complete amino acids, heme iron, zinc, B12, creatine, and carnitine
- No anti-nutrients, no conversion required — just direct absorption
- Supports muscle retention, bone density, cognition, and hormonal health
- Liver, eggs, beef, lamb, sardines = ancestral staples

Berries & Veggies

- Berries offer low-glycemic polyphenols, antioxidants, and fiber
- Cruciferous and leafy greens provide magnesium, potassium, and sulfur compounds
- Ancestral diets favored cooked, seasonal, and moderate intake
- Excess raw veg can impair digestion and mineral absorption

GLP-1 Activation Protocol

- Protein at every meal
- No snacking between meals
- Eat slowly and mindfully
- Walk 10–15 minutes after meals
- Sleep 7+ hours
- Prioritize whole foods over packaged ones

Visual Plate Template

- 1 palm of protein
- 1 thumb of fat
- 1–2 fists of fiber-rich veg
- Optional: ½ cup starch (sweet potato, rice, squash)

Module 3: Movement & Recovery

You don't need a gym. You need consistency.

Why It Works

- Walking improves insulin sensitivity and activates GLP-1
- Strength training builds lean mass and metabolic flexibility
- Recovery lowers cortisol and improves sleep quality

Daily Movement Targets

- Walk 30+ minutes
- Stretch or breathe for 5 minutes
- Optional: bodyweight circuit (squats, pushups, planks)

Weekly Rhythm

- 3+ walks
- 2+ strength sessions (bodyweight or resistance)
- 1+ recovery session (stretching, breathwork, sauna)

Recovery Habits

Sleep 7+ hours

- Breathwork before bed
- Magnesium-rich foods (spinach, pumpkin seeds)
- Epsom salt baths or sauna (optional)

Module 4: Sleep & Stress

Sleep is your metabolic reset button. Stress is your appetite amplifier.

Circadian Biology

- Morning sunlight boosts serotonin, regulates melatonin, and sets your circadian rhythm
- Sunlight exposure improves sleep quality, mood, and insulin sensitivity

Sleep Protocol

- No screens 30 min before bed
- Dark, cool room
- Consistent bedtime
- Breathwork or journaling

Stress Protocol

- Walk daily
- Breathwork: 4-7-8 or box breathing
- Limit caffeine after noon
- Practice saying “no” to energy drains

Micronutrient Support

Nutrient	Role in Health	Best Sources
Magnesium	Sleep depth, insulin sensitivity, muscle recovery	Spinach, pumpkin seeds, sardines
Zinc	Testosterone, immune function, wound healing	Red meat, shellfish, eggs
Creatine	ATP production, brain function,	Beef, lamb, wild game

	muscle retention	
B12	Energy, cognition, red blood cell formation	Liver, eggs, fish
Omega-3s	Anti-inflammatory, brain health, hormone balance	Salmon, sardines, mackerel

Module 5: Mindset & Habits

You don't rise to the level of your goals — you fall to the level of your systems.

Identity Shifts

- "I'm someone who eats for satiety."
- "I walk daily because it clears my mind."
- "I prep meals because I value my energy."

Habit Stacking

- After I make coffee → I walk outside
- After I brush my teeth → I do breathwork
- After I eat dinner → I prep tomorrow's lunch

Tracking = Momentum

Habit	Mon	Tue	Wed	Thu	Fri	Sat	Sun
Walk 30 min	☐	☐	☐	☐	☐	☐	☐
Sleep 7+ hrs	☐	☐	☐	☐	☐	☐	☐
No snacking	☐	☐	☐	☐	☐	☐	☐
Breathwork	☐	☐	☐	☐	☐	☐	☐
Protein at each meal	☐	☐	☐	☐	☐	☐	☐

Reframe Setbacks

- “I missed a day” → “I’m building a streak again”
- “I slipped up” → “I’m learning what triggers me”
- “I’m behind” → “I’m still in the game”

Module 6: Recipes & Meal Prep

Simple meals. Powerful results. No calorie counting required.

Why These Recipes Work

- Protein activates GLP-1 and supports lean mass
- Fiber improves satiety and gut health
- Fat supports hormones and slows digestion
- No snacking = better insulin sensitivity
- Walking after meals = better glucose disposal

Meal Prep Tips

- Cook protein in bulk (chicken thighs, ground beef, salmon)
- Chop veggies ahead of time
- Use olive oil, sea salt, and herbs liberally
- Store meals in glass containers
- Keep emergency meals: boiled eggs, canned fish, frozen veg

Full 90-recipe cookbook delivered separately in 3 parts.

Module 7: Trackers & Tools

Tracking builds momentum. It turns invisible wins into visible proof.

Macro Summary

- Protein = Repair
- Fat = Hormones
- Carbs = Energy
- Fiber = GLP-1 Activation

Visual Tracker Tips

- Use stickers, highlighters, or digital checkboxes
- Track weekly wins, not daily perfection
- Reflect every Sunday: What’s working?

Module 8: Bonus Inspiration

“I didn’t think simple could work — but it did.” “This guide gave me clarity and confidence.” “I lost 12 lbs in 60 days without counting calories.” “I finally feel like I’m becoming the person I want to be.” “I stopped chasing motivation

and started building habits.”

Motivational Quotes

“Your body is your blueprint — build it wisely.” “Progress over perfection.” “Consistency compounds.” “You don’t need motivation. You need a system.” “Small steps. Big shifts.”

Science Summary

- GLP-1 regulates appetite and insulin
- Sleep and walking improve insulin sensitivity
- Protein and fiber increase satiety
- Habit repetition drives identity change

Final Reflection

- What surprised you most?
- What felt easier than expected?
- What do you want to carry forward?
- What identity are you stepping into?

Write your answers. Own your transformation.
